hemorrhoids

## Nexus: What's next in hemorrhoid care

**The Nexus™ Hemorrhoid Ligator**, by inx Medical, is a great step forward in rubber band ligation technology. It is specially designed to be the most patient-friendly rubber band ligation option available. It is the easiest, quickest, and most effective way for your doctor to treat your hemorrhoids — and it doesn't involve surgery at all. The innovative Nexus design lets your doctor comfortably treat your hemorrhoids in a matter of seconds.

With the **Nexus Ligator System** the procedure could not be simpler. You don't have to do any bowel preparation before the procedure, there is no sedation required during the procedure, and no pain medication is needed after the procedure. You're back to normal activity within 24 hours.

## Nexus: One quick, easy office visit to eliminate painful hemorrhoids

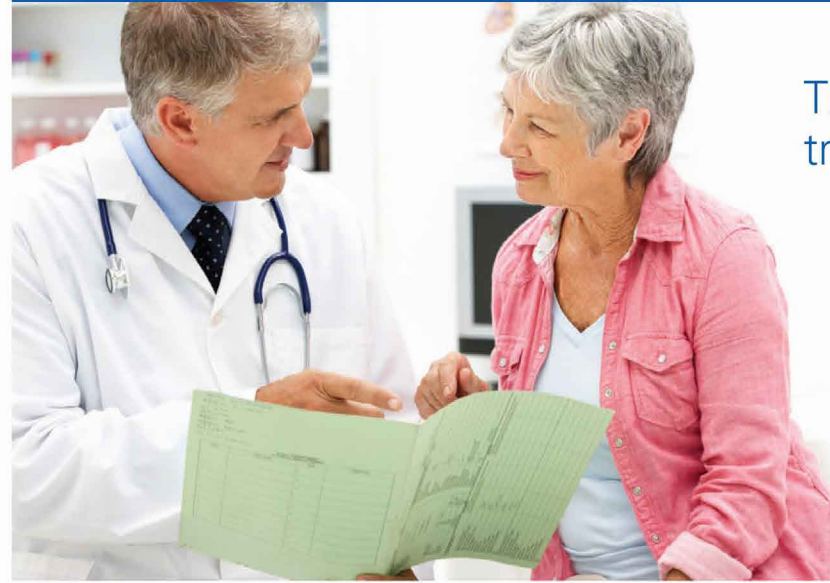

### You can't ignore hemorrhoids any longer

Hemorrhoids are the most common anorectal disease in the Western World, yet typically go untreated. In fact, only one in three patients seek medical help. Why? Most people are embarrassed to talk to their doctor about this condition. They try over-the-counter remedies, which oftentimes bring little relief. You may be frustrated by the same dilemma, so it is important to know your other options.

The most popular non-surgical option is called rubber band ligation, and it is widely considered the "gold standard" for hemorrhoid treatment. However, it has not changed much in more than fifty years—until now. The innovative **Nexus Ligator System with EasyFire™ technology** takes a proven method for treating internal hemorrhoids and makes it better!

### Why should I go to a doctor who uses the Nexus Ligator System?

- Quickest treatment option
- Non-allergenic, with latex-free rubber bands
- Completely disposable, eliminating the risk for cross-contamination
- Can treat single or multiple hemorrhoids during one procedure
- Non-disruptive before and after the procedure
- Gives doctors the clearest possible view of the procedure, ensuring safety

### The non-surgical hemorrhoid treatment that isn't so painful:

During this painless procedure, the physician uses the Nexus Ligator to place a tiny rubber band around the inflamed hemorrhoid, which cuts off the blood flow. After a few days the hemorrhoid falls off. That's it! Who knew getting rid of your hemorrhoids could be so easy?

## Hemorrhoid Treatment Options

Procedure	Average Procedure Time	Average Recovery Time	General anesthesia and pain medication prescribed	Average Success Rate
Rubber Band Ligation with the Nexus System	Less than 5 minutes	Less than 1 day	None required	95%
Sclerotherapy	Approximately 20 minutes	2 to 3 days	Pain medication is prescribed	75%
Infrared Coagulation (IRC)	Approximately 20 minutes	3 to 5 days	Pain medication is prescribed	75%
Surgical Hemorrhoidectomy	Approximately an hour	Up to 3 weeks	Done under general anesthesia and pain medication is prescribed	98%
